

# Application Mapping Training

## Quick-Start Solutions • Lasting Results

### Overview

Configure Consulting offers end-user and administrator training for application mapping within HP UCMDB and HP Universal Discovery. Both training courses are geared towards teaching students to create, use and optimize application dependency maps. Our application mapping courses are focused on utilization of the UCMDB/UD functionality including business service models, impact analysis, custom reporting, and application snapshots.

### Course Offerings

**3-day course:** The end-user training course is focused on creating, managing and utilizing application maps.

**4-day course:** The admin training course is similarly focused on managing application maps and optimizing CMDB performance and resources.

Each course is equipped with handouts and specialized cloud environment for students.
