

CONFIGURATION & CHANGE

proactive management of your IT environment

Configuration Management Systems

- Options for both agent-based and agent-less infrastructure discovery
- Track configurations across physical and virtualized environments
- Capability to integrate with numerous data sources
- Virtualization of IT infrastructure and dependencies

Unauthorized Change Detection

- Auto-discovery to augment change process
- Latent change detection to identify delayed or improperly executed change
- Audit trail across actual, authorized and managed changes

Application Mapping Services

- Dynamic modeling of business-level applications and supporting services
- Impact analysis across mission critical applications
- Authoritative views into application dependency
- Reports to support scenario-based testing
- Disaster recovery resources

Datacenter Transformation

- Auto-discovery to augment wave group planning
- Scenario-based testing to avoid business service interruptions
- Reporting to validate bill of materials based on auto-discovery

Data Model Workshop

- 2-week workshop geared towards identifying CMS data source to be integrated into UCMDB
- General data model outline that includes which infrastructure elements, attributes and monitored metrics to be pulled into CMDB
- Discussion and proposals around how this information could be presented within UCMDB
- High-level blueprint and data model findings
