

Asset Manager 9.x Course

Quick-Start Solutions • Lasting Results

Overview

This course is designed to provide students with an understanding of the fundamental concepts of the HP Asset Manager application. The main focus of this course is on the operational-level process activities and supporting methods and approaches to executing these processes in a practical, hands-on learning environment. This course will provide the detailed lessons on all main Asset Manager modules such as the Portfolio, Software Asset Management, etc and basic functionality throughout the tool. By fully understanding Asset Manager concepts and capabilities you will be able to configure, customize, and deploy Asset Manager whilst maximizing the value and potential it can provide. You will also be able to implement key asset management solutions to maximize value and ROI.

Objectives

- Understand the purpose of IT Asset Management
- Understand End User perspective of HP Asset Manager
- Understand Administrator perspective of HP Asset Manager
- Understand the architecture, integrations and system-level components of HP Asset Manager
- Be able to configure and customize HP Asset Manager modules and/or features to meet specific functional and business requirements
