

Un-Authorized Changes

Electric fence around your custom app

Overview

Unauthorized change detection goes well beyond file level or server level control. Identify and report unauthorized changes across any of your custom or COTS applications by reconciling auto discovered changes with your planned IT Service Desk change tickets. Reporting on unauthorized changes is not only critical to the organization but also a requirement by many regulatory compliance standards.

ROI

- Track changes made without proper authorization
- Report app level changes without corresponding tickets
- Visualize the risk and impact of planned changes
- Notify unauthorized downstream changes to app owner
- Instantly visualize and act upon change history reporting

Quick-start Implementation - 5 weeks

Configure Consulting has packaged quick-start implementations that are targeted to deliver quick, powerful value within a focused subset of the IT environment. The emphasis is on building a strong foundation, and demonstrating meaningful results that can later be scaled out enterprise-wide. The 5-week implementation process includes:

- Project initiation & planning
- Requirements validation
- Installation & Configuration
- Initiation of Automatic Discovery
- Change detection scope setup
- Initial screening of unauthorized changes
- Integration with service desk
- Documentation
- Project Close-out
