# HPE IT Asset Manager Essentials Course

## Quick-Start Solutions • Lasting Results

## Overview

This course is designed to provide Asset Manager administrators with an understanding of the fundamental concepts, day-to-day operation and tactical skills involved in administering the HPE Asset Manager environment, including basic user interface and data management, user access management and database customization and maintenance.
The main focus of this course is to provide real-world, hands-on experience, at an operational-level for those individuals charged with administrating an installation of HPE Asset Manager with multiple users. This course will include the detailed lab exercises and examples for working within the Asset Manager windows client and supporting administration tool(s).

## Objectives

- Understand the concept of IT Asset Management
- Understand the function, architecture and system-level components of HPE Asset Manager
- Learn how to access, query, customize the user interface of HPE Asset Manager windows client
- Learn how to configure and customize HPE Asset Manager via the application designer and automated process manager tool(s) to meet functional and/or business-level requirements

## Intended Audience

- *Asset Manager Administrators*
- *ITAM Project Managers*
- *Application Developers*

## Materials

LIST OF ITEMS NEEDED FOR COURSE, IF ANY
